CSS3: Circular approach to wastewater and nutrients

CSS4: Circular approach to industrial and urban plastic/rubber waste

Circular systemic solutions

CSS1: Circular approach to wood packaging waste

CSS2: Circular approach to food and feed

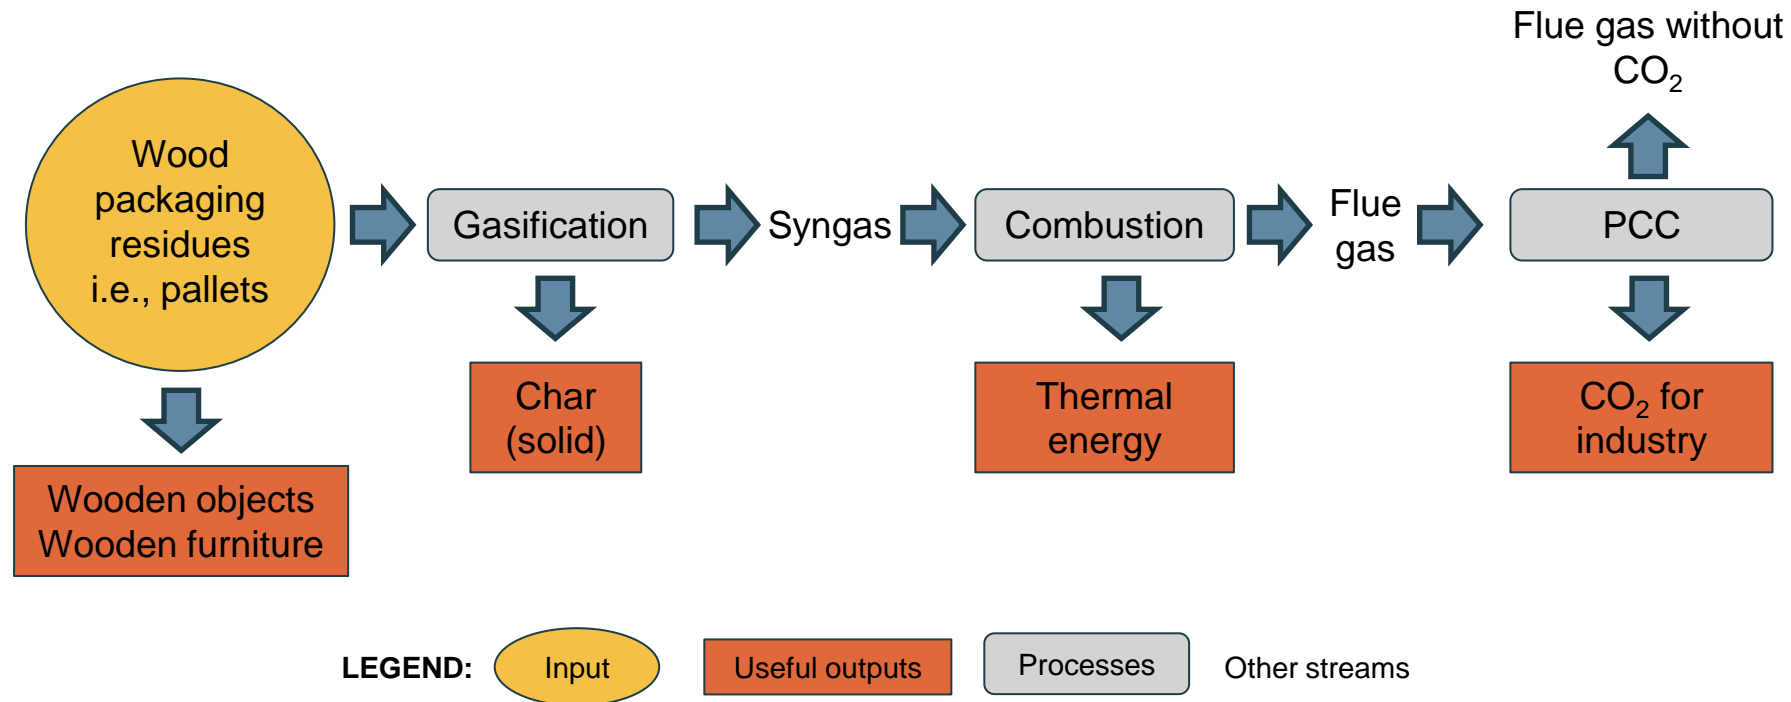

CSS3: Circular approach to wastewater and nutrients

CSS4: Circular approach to industrial and urban plastic/rubber waste

CSS1 – Overview

Objective: Development of a circular economy concept based on the valorization of wood packaging waste (e.g., pallets) through refurbishing, reusing, recycling, energy recovery, and material valorization.

CSS1 – Biomass gasifier

CSS1 – Biomass gasifier

Char addition to polymers - materials

Samples:

1. **LDPE**: Pure low-density polyethylene
2. **Front S11.1**: Granulated compound
3. **PE+1%ST**: Polyethylene 99% + 1%wt char A - Standard (ST)
4. **PE+1%MCY**: Polyethylene 99% + 1%wt char B - Maximum Carbon Yield (MCY)

In collaboration with:

TYMOTHEUS srl

Char addition to polymers - methods

Sample preparation:

- **Compounding** by DSM Micro-compounder 15 cc co-rotating twin-screw extrusion with mixing function.
- **Injection-moulding** by DSM Micro Injection Moulding Machine 10 cc .

For the production of the samples to be tested for Melt Flow Index (MFI), simple threads were produced by flowing the material from the extrusion head. This material was ground using a polymer recycling device, i.e., a TRIA blade mill.

Char addition to polymers - methods

	LDPE	FrontS11.1	PE+1%ST	PE+1%MCY
Mixing time [s]		60		75
T profile [°C]		150 - 165 - 180		
T melt [°C]		176		
Screw rotation speed [rpm]		50		39
T mould [°C]		25		
T injection [°C]		185		
P injection [bar]		11		
Injection time [s]		19		

Different viscosity

Char addition to polymers - methods

Tensile tests:

- Following ISO 527
- Universal electronic dynamometer from LLOYD INSTRUMENT, model 30K (no external strain gauges)
- Type 1BA geometry
- Traverse speed of 50 mm/min
- Useful stretch ~ 50 mm
- Tests were conducted until the specimens ruptured, which occurred for limited plastic deformations

MFI tests:

- MFI 452 device from MP strumenti
- $T = 190$ °C
- $w = 2.16$ kg
- $t = 60$ s

Char addition to polymers - results

Sample	σ_y (MPa)	ε_y (%)	σ_{br} (MPa)	ε_{br} (%)	E (MPa)	MFI (g/10min)
