Adjara region:	~ 0,355

Transition of Georgia to a new waste management 6 in the sense of circular economy

### The Project

#### Background

The Municipality has identified solid waste collection and disposal, as well as reform of the existing waste management system as a key priority for Tbilisi. In 2016 the Government of Georgia has adopted the National Waste Management Strategy and Action Plan, which imposes certain obligations on the municipalities of Georgia, including Tbilisi. This has been updated in May 2022 As part of these obligations, the City seeks to improve the sector management within an ambitious timeframe.

The Project beneficiary is Tbilisi City hall parallel with Tbilservice Group Ltd., a municipally owned company in charge of solid waste and construction waste management in the city, street lighting, maintenance of underground passes, as well as other services.

Transition of Georgia to a new waste management 7 in the sense of circular economy

### Main Features of the Project

#### General objectives

#### to formulate for Tbilisi a strategy on

- municipal solid waste (MSW) prevention,
- waste separation at source and

Corfu

0000

• collection, recycling and recovery activities

### Main Features of the Project

#### Main Tasks

Task 1: Baseline Study and future projection

Task 2: Develop the waste prevention and recycling Strategy for Tbilisi

Task 3: Cost and revenue analysis of waste prevention and recycling scenarios

Task 4: Action Plan for the implementation of selected waste prevention activities and recycling scenarios

Corfu

 $\neg \neg \neg \neg$ 

### Projection for Tbilisi - Population

**Evolution of population in Tbilisi** 

Corfu

0000

Transition of Georgia to a new waste management 10 in the sense of circular economy

### Projection for Tbilisi – Waste quantities

Corfu

0000

Evolution of waste quantities in Tbilisi

Transition of Georgia to a new waste management 11 in the sense of circular economy

### Waste composition

0000

Transition of Georgia to a new waste management 12 in the sense of circular economy

### Waste composition

\* Sparse

- Share of **organic waste** represents **approximately 47%**;
- Share of recyclable materials (plastics, paper/cardboard, metals, glass, wood and textile) represents approximately 38% (maximum potential);
- Very low share of **WEEE < 0.1%**;
- Share of **hazardous waste** is **estimated** < 1% and contained medical waste (needles and medicines), used oils, old paints, batteries and accumulators, ink cartridge for printers, air filters for cars, etc.;
- Share of **packaging waste** is **estimated by 30%** of the total MSW of Tbilisi City;
- Share of **packaging waste for the Deposit Fund System** is **estimated by 4%** of the total MSW of Tbilisi City.

Category	EU	Georgia		
Prevention	Prevention objectives are significantly reinforced, in particular, requiring Member States to take specific measures to tackle food waste and marine litter as a contribution to achieve EU commitments	No targets according to existing national waste management strategy; Draft National Waste Management Action Plan includes qualitative targets for waste prevention and also, for plastic waste prevention (see above). For the latter, at the actions level it is envisaged to develop a regulation on single- use plastic by 2026; also it is envisaged to design 2 prevention programmes, with 1 plastic prevention programme		
Collection	<ul> <li>Separate collection obligations are strengthened and extended to:</li> <li>hazardous household waste by end 2022</li> <li>bio-waste by end 2023</li> <li>textiles by end 2025</li> </ul>	<ul> <li>Collection of municipal solid waste: 95% by 2025 according to the draft national waste management action plan and 100% by 2030 by existing national waste management strategy</li> <li>Collection and transportation of municipal hazardous waste: 50% by 2025 according to the draft national waste management strategy and 100% by 2030 by existing national waste management strategy</li> </ul>

0000

Transition of Georgia to a new waste management 14 in the sense of circular economy

Category	EU	Georgia
Landfill	Reduce waste going to landfill to a maximum of 10% of municipal waste by 2035	No quantitative targets
Biodegradable Waste	Prohibition to landfill biodegradable waste that has been separately collected for recycling in accordance with Directive 2008/98/EC	No targets under existing national waste management strategy; Only qualitative targets and actions are included in the draft updated National Waste Management Action Plan; At the actions' level, the draft plan gives quantitative indicators for implementing waste biodegradable waste composting and recovery pilot projects
Hazardous Waste	-	No targets under existing strategy; Updated Draft Waste Management Action Plan includes qualitative targets and actions for hazardous wastes; At the actions' level, the draft plan gives a quantitative indicator for piloting (at least 1 project) hazardous wastes energy recovery through incineration

Corfu

0000

Transition of Georgia to a new waste management 15 in the sense of circular economy

Category	EU	Georgia
Construction & Demolition Waste (CDW)	70% of non-hazardous CDW by 2020	No general targets at national level. Draft updated National Waste Management Action Plan includes a qualitative target and actions for CDW; At the municipal level, Batumi Green Cities Action Plan under strategic objective SW2 Reduce waste to landfill and increase recycling includes following quantitative targets for CDW: - 25% CDW recycling rate by 2025 - 90% of CDW either recycled or disposed in a permitted landfill by 2025

Corfu

0000

Transition of Georgia to a new waste management 16 in the sense of circular economy

0000

	Category	EU	Georgia
	Recycling targets	65% of municipal waste by 2035 (including biodegradable waste for recycling)	Updated Draft National Waste Management Action Plan does not include quantitative targets for recycling except for EPR targets; Existing national waste management strategy includes following recycling targets:
-	- Paper and cardboard	-	80% of paper and cardboard by 2030
-	Glass	-	80% of glass by 2030
-	Metal	-	90% of metals by 2030
-	- Plastic	-	80% of plastic by 2030
			Batumi Green Cities Action Plan includes source separation/recycling target:
	- Total MSW		40% source separation for recycling by 2025

#### Waste management flows

#### Revenues, 2019

Source of Income	2019
Fees paid by the population, GEL	28,103,168
Fees paid by legal entities, GEL	20,209,543
Subsidies by Tbilisi budget, GEL	29,970,297
Fees and subsidies by Tbilisi budget to TSG, GEL	78,283,008
TSG's own income from direct contractors, GEL	6,280,287
Total revenues for waste service, GEL	84,563,295
Total revenues for waste service, EUR	21,228,924

Corfu

0000

Transition of Georgia to a new waste management 23 in the sense of circular economy

#### Operational cost, 2019

Total Operational Cost for 2019 amounted to 79,000,000 GEL. Operational cost for waste management only (≈ 68% of total) matches closely with Revenues

Transition of Georgia to a new waste management 24 in the sense of circular economy

#### (OPEX) Indicators for waste management service

Corfu

0000

Indicator	Value
Unit waste collection and transportation cost	72.3 GEL/t
Unit cost for landfill operation	18.2 GEL/t
Unit cost for administration	19.1 GEL/t
Unit cost for overall waste management (excluding street cleaning)	110 GEL/t
Unit cost for waste management per person (weighted average)	38.5 GEL/p-y
Unit cost for waste management per household (weighted average)	133 GEL/HH-y
Unit cost for waste management and street cleaning (for comparative reasons)	178 GEL/t

### Cost Assessment (OPEX) for implementation

### <u>Annual OPEX for Waste management elements excl.</u> <u>revenues</u>

Element	Cost, €/y	Cost, €/t incoming waste
Waste collection - transportation	≈ 10,000,000 €/y	23 €/t waste
Recycling Yards	232,000 €/y	11 €/t
MRF	2,360,000 €/y	24 €/t
Composting Plant	276,000 €/y	21 €/t
MBT - biostabilisation	≈ 11,000,000 €/y	35 €/t
MBT - biodrying	≈ 14,000,000 €/y	45 €/t
Landfill	≈ 4,500,000 €/y	10 €/t

Transition of Georgia to a new waste management  $_{\mbox{32}}$  in the sense of circular economy

Tariffs

### **Increase of tariffs**

ENVIROPLAN S.A. Consultants & Engineers

# Transition of Georgia to a new waste management $_{33}$ in the sense of circular economy

### Conclusions

- > Only recycling targets for packaging are existing at the moment
- Reduction of biodegradable waste going to landfill is a challenge
- The charging of waste management users must be increased for both households and legal entities
- Sufficient revenues out of tariffs only in the big cities of Georgia, other are subsidized up to 100 %
- If users of secondary fuel (RDF) are available close to Tbilisi, the most advantageous scenario is the combination of Scenarios 2c+3c
- If no users of secondary fuel (RDF) are available, the most advantageous scenario is the combination of Scenarios 2b+3b
- RDF as new energy source might become more and more interesting

### Waste Management Strategy – Why required?
